ROOFER TESTIMONIALS

"The best roofing tool in the business. We're able
to rip through layers of roofing in no time."

—Chris Caron, Horch Roofing, ME

"There are few tools that totally exceed your
expectations. This is one of them."

—Rich Cargin, Cargin Construction, Le Mars, IA

Demo Eater™ models 8126 and 8130D feature reinforced gussets and a 90° strike plate

8126

8130D

Junior model is designed to reach tight areas

Junior

Shingle Eater is the hardest working, most durable roof stripping tool on the market. Made in the USA of high quality steel, Shingle Eater's single piece construction is light but tough for more shingle stripping power with less effort, so you can get the job done and get on to the next one.

HOW MANY TEAR OFFS CAN YOUR TOOL SURVIVE?

Shingle Eater tools are engineered to last through hundreds of thousands of repetitions. The sturdy single piece steel construction and durable heat-tempered footplate mean every Shingle Eater can take on at least 1.5 times as many roof removals as the competition, while a built in nail puller and self-sharpening tapered teeth save you time on every tear-off. You've found a secret weapon.

SHINGLE EATER SAVES TIME, YOUR MONEY, AND YOUR BACK

As a roofer, your time and your talent are your strengths. Protect your back with Shingle Eater's ergonomic design, sharp strong teeth, and subtle flex. Shingle Eater quickly and easily lifts massive amounts of stubborn shingles with less lifting, bending, and prying.

USA-MADE TO THE HIGHEST STANDARDS

From our steel sources to our testers, we work with longstanding U.S. partners who share our commitment to quality, safety, and protecting the workforce of those who are building and rebuilding homes across North America.

Available only at authorized distributors.
